# Survey Methodology

# Survey Framework

### Autonomy

Decisions and daily work  
(3 items)

### Collaboration

Innovative teamwork  
(4 items)

### Employee Optimism

Future of company and role  
(2 items)

### Remote Work Satisfaction

Remote work transition  
(3 items)

### Resources & Tools

Efficiency and availability  
(3 items)

### Support

Connection and inclusion  
(5 items)

### Work-Life Balance

Work-life impact  
(5 items)

### Work-Role Stress

Role clarity and workload  
(4 items)

**ENGAGEMENT**  
(8 items)

**PRODUCTIVITY**  
(2 items)

**WELL-BEING**  
(5 items)

CREATED BY TALMETRIX

# Glossary of Terms

- **Distribution of Favorability:** Shows the general proportion of **favorable** responses (“strongly agree” and “agree”), **neutral**, and **unfavorable** responses (“disagree” and “strongly disagree”).
  - Why we use red, gray, and purple: To meet 508 compliance regulations for visual impairments.
- **Response Scales:** All structured response questions use a 5-point Likert scale. There were 2 standard open-ended question types.
- **Rounding:** The sum of % **favorable**, **neutral**, and **unfavorable** scores may add up to 99 or 101.
- **Δ:** The difference between two numerical values. Here, the  $\Delta$  is used to show the difference between your organization’s and the benchmark’s favorability scores.
- **Reverse Score:** Some items are reverse scored, meaning those who answered **favorably** answered “strongly disagree”/“disagree” or “highly unlikely”/“unlikely” to some items.
- **Item:** Synonymous with survey “question.”

# Survey Administration

Employees accessed the survey **1/1/20 – 1/14/20** via **unique email link**.

The survey was available in both English and Spanish.

Anonymity threshold: **5**.  
No groups with fewer than 5 respondents are reported.

# Summary of Findings

## OVERALL PARTICIPATION: 84%

- ### MOST FAVORABLE CATEGORIES
- 1. Autonomy (**81% favorable**)
  - 2. Resources & Tools (**80% favorable**)
  - 3. Collaboration (**79% favorable**)

- ### MOST NEUTRAL CATEGORIES
- 1. Support (**25% neutral**)
  - 2. Engagement (**22% neutral**)
  - 3. Well-Being (**19% neutral**)

- ### MOST UNFAVORABLE CATEGORIES
- 1. Support, Well-Being, Remote Work Satisfaction (**12% unfavorable**)
  - 2. Work-Role Stress (**11% unfavorable**)
  - 3. Work-Life Balance, Support (**9% unfavorable**)

# Key Driver Results

# About the Key Driver Analysis

- Key driver analyses (KDAs) are used to **understand which survey categories have the most influence on the following outcomes**:
  1. Engagement
  2. Productivity
  3. Well-Being
- The key driver analysis indicates which survey categories are driving the outcomes **in order of influence**, starting with the most impactful.
- Key drivers are only conducted for groups ~100+.
- The next few slides will provide the top drivers for each outcome.

\*see appendix for a more detailed description of the Key Driver Analysis methodology

# About the Key Driver Analysis

- When analyzing key drivers, consider the following:
  - Key drivers can **positively** or **negatively** influence Engagement, Productivity, or Well-Being.
    - If a key driver is a highly favorable category, an assumption could be made that it is having *positive* influence on the outcome (e.g., Engagement).
    - The opposite applies as well: if a key driver is a highly unfavorable category, it may be having a *negative* influence on the outcome.
  - Key drivers are recommended areas to focus improvement efforts because they are *predictive* of the outcomes of Engagement, Productivity, or Well-Being.
    - You will see the best ROI when organizational efforts are made towards the key driver categories.
  - If a key driver is assumed to be *positively* influencing an outcome, keep up the good work and focus on maintaining the positive perceptions in these areas.

# Top Drivers of Engagement

Displayed in order of influence, starting with the most impactful.

# Top Drivers of Productivity

Displayed in order of influence, starting with the most impactful.

# Top Drivers of Well-Being

Displayed in order of influence, starting with the most impactful.

# Key Driver Analysis Methodology

- The key driver analysis method:
  - Defines **Engagement, Productivity, and Well-Being as dependent variables and all the other categories as independent variables.**
  - Enters all the categories into a **regression model**. The regression model tests the relationship between each of the independent variables and the dependent variables (Engagement / Productivity / Well-Being).
  - Uses the **backwards elimination method** to find the strongest possible model of independent variables as predictors of model at a time until the most effective grouping of categories in predicting Engagement / Productivity / Well-Being.
    - One independent variable is dropped out of the regression model at a time until the most effective grouping of categories in predicting Engagement / Productivity / Well-Being is found.
  - Once the best regression model is found, the method **ranks the order of the categories' influence using the  $t$  and  $p$  statistics.**
    - The bigger the  $t$  and the smaller the  $p$ , the more the given category impacts Engagement / Productivity / Well-Being.
